LIVE PRODUCT · IN DAILY USE

Procurement System Hard Chrome Tech

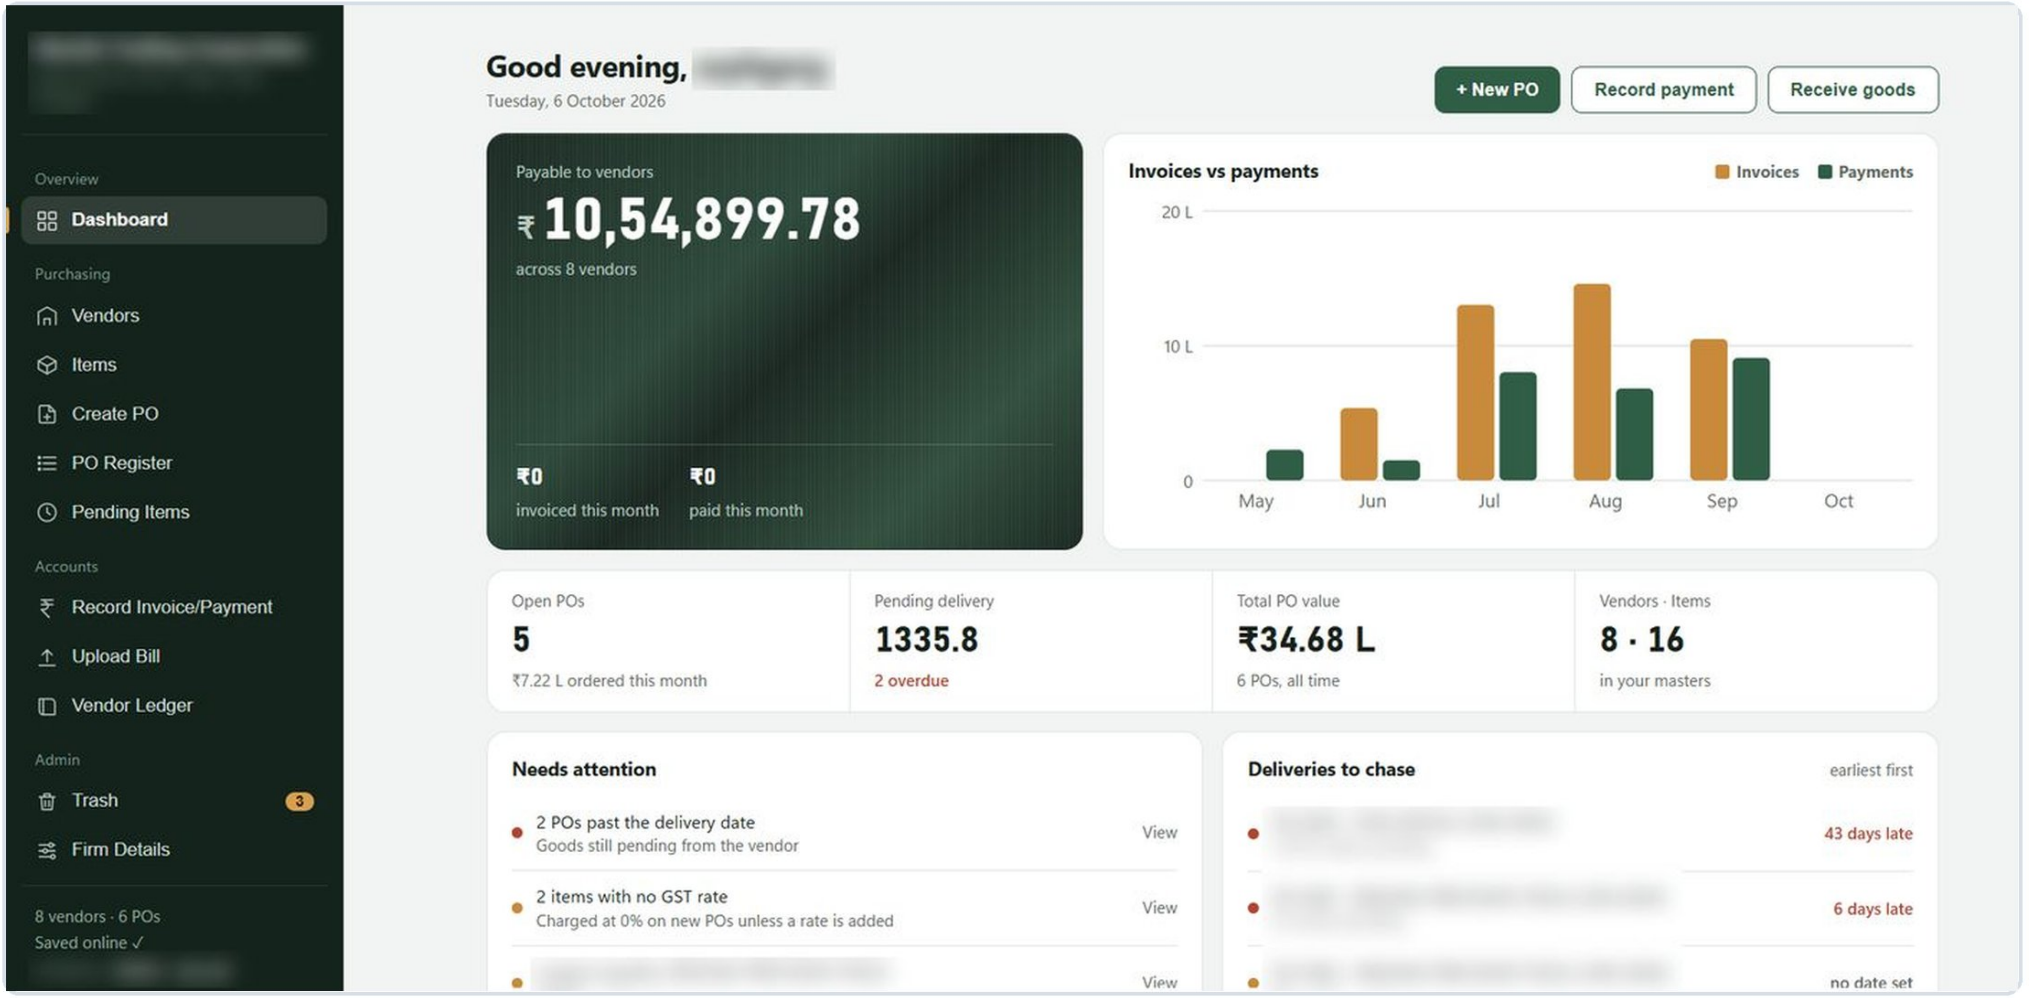

One SQL-backed system for the full purchase cycle: vendors, items, purchase orders, goods receipt, invoices, payments, a vendor ledger and a live dashboard. Built by Sudiksha Gupta to replace paper registers and spreadsheets.

9 vendors · 18 items · 8 purchase orders tracked

Firm, vendor and user names are blurred to protect client data.

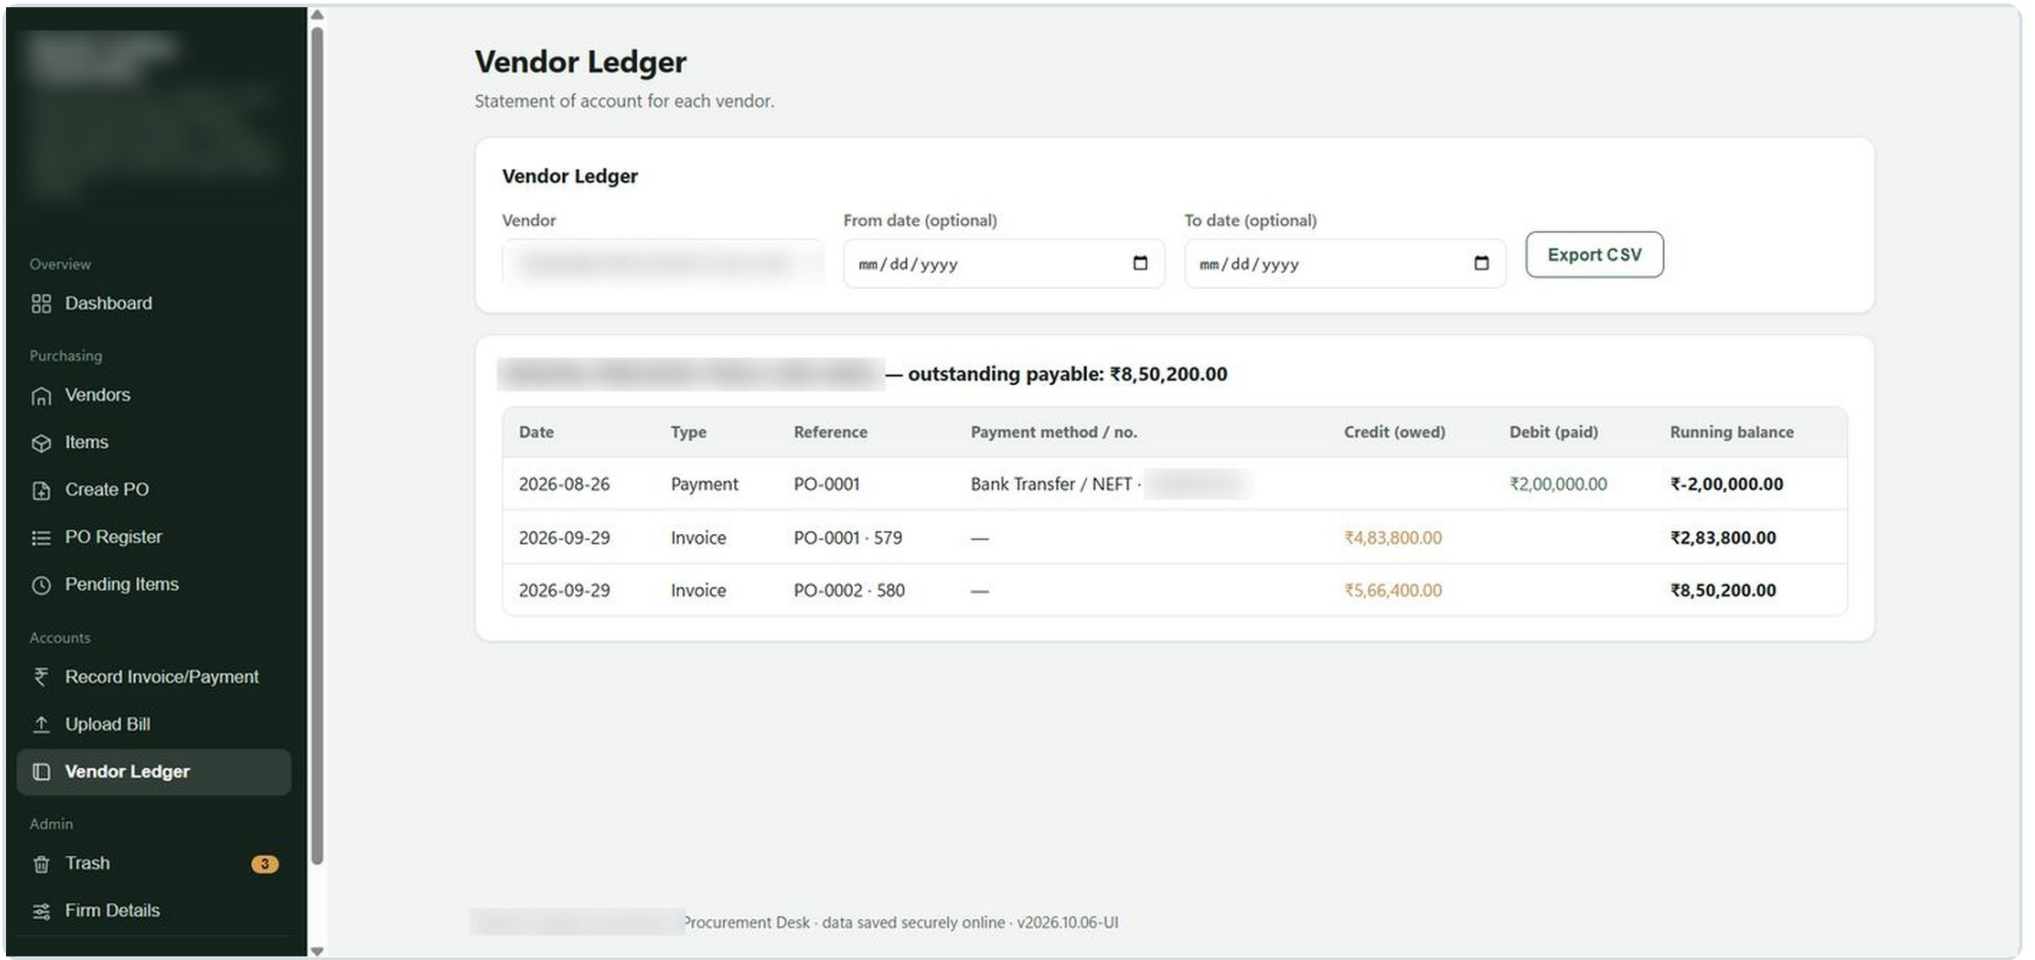

Dashboard

Payables to vendors, invoices vs payments by month, open POs, pending deliveries and items that need attention.

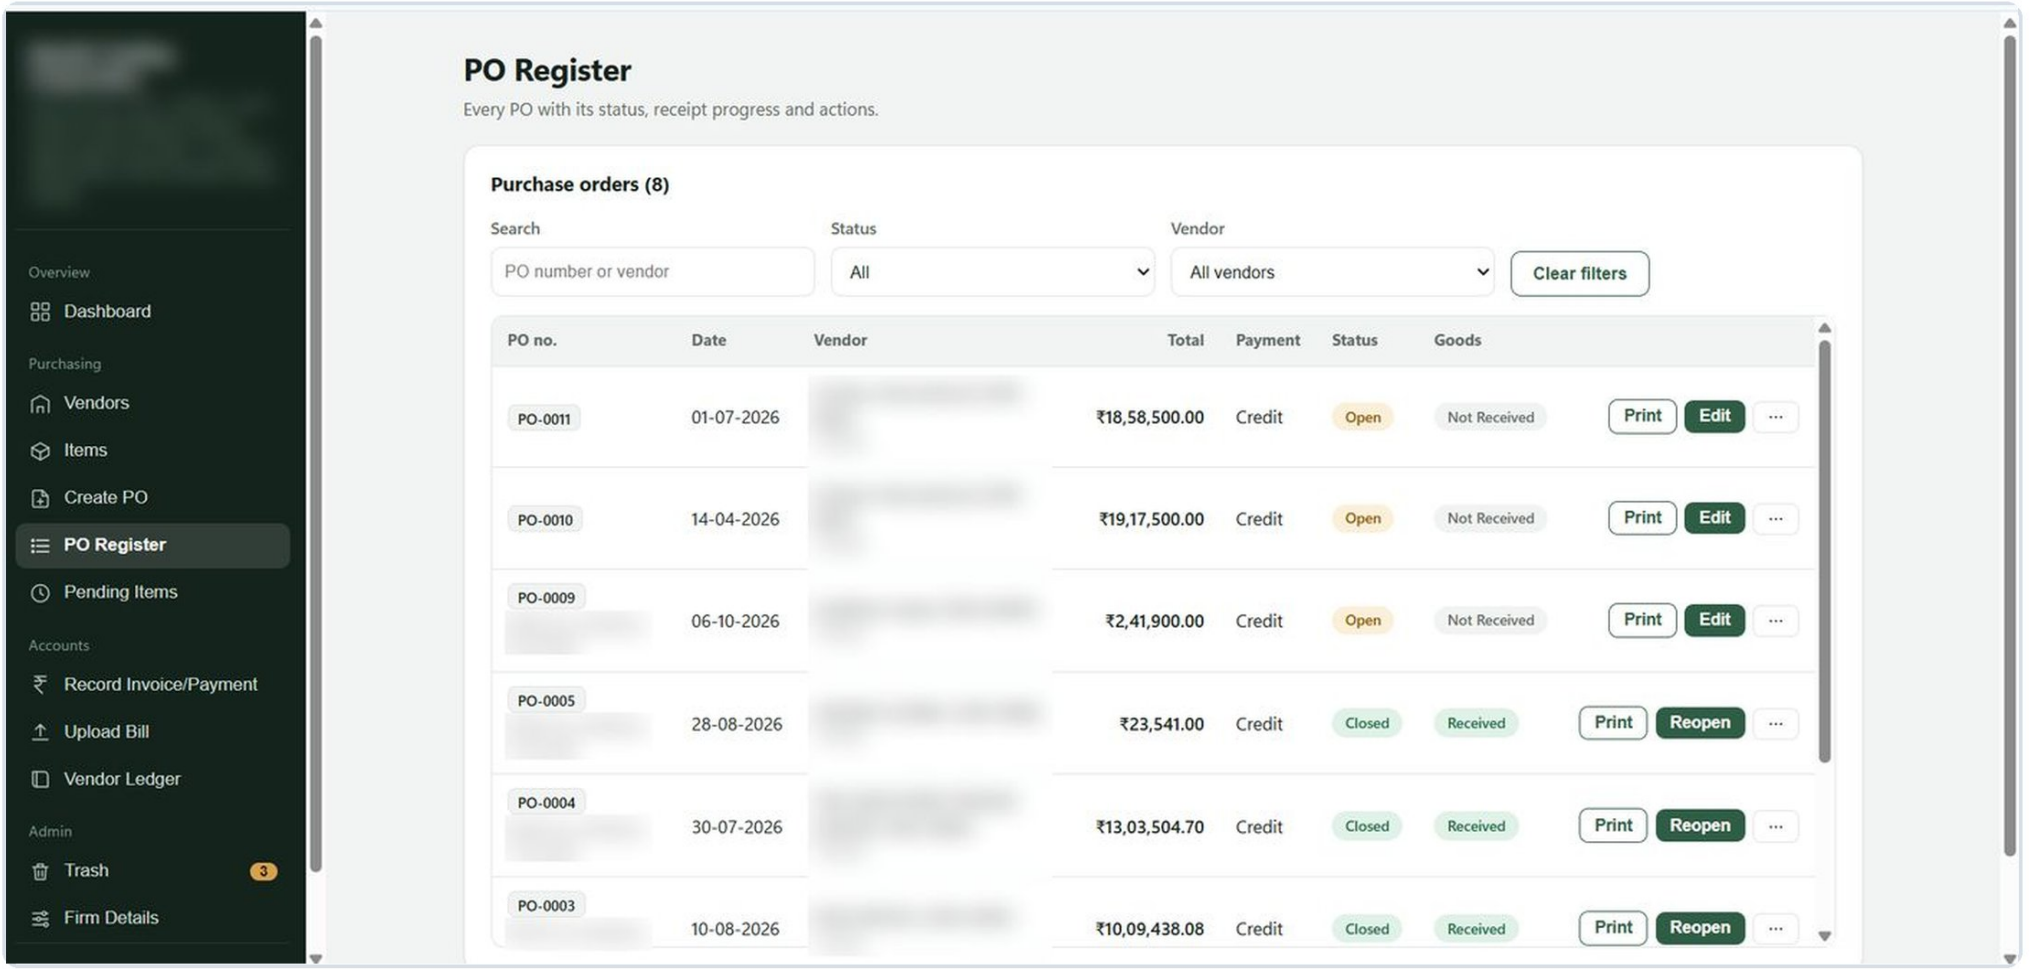

Vendor ledger

Statement of account for each vendor, with a running balance and CSV export.

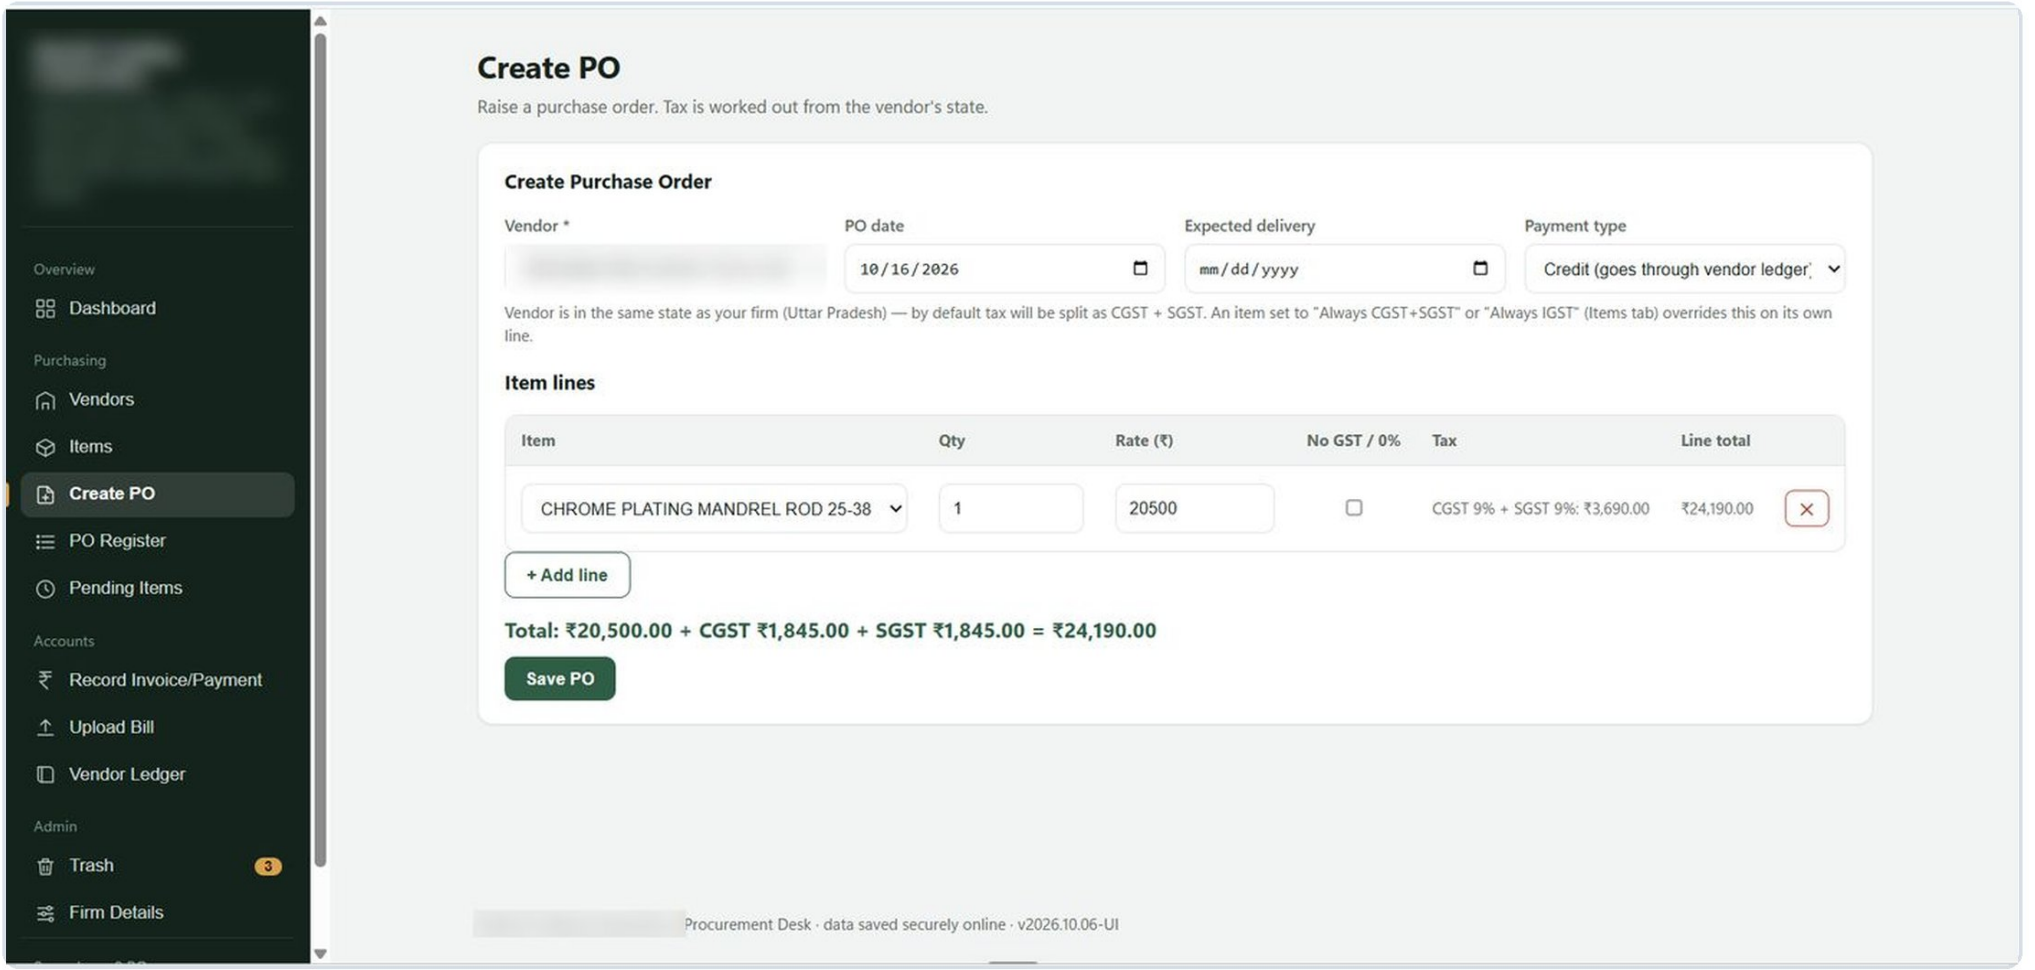

PO register

Every purchase order with its value, payment type, status and goods received.

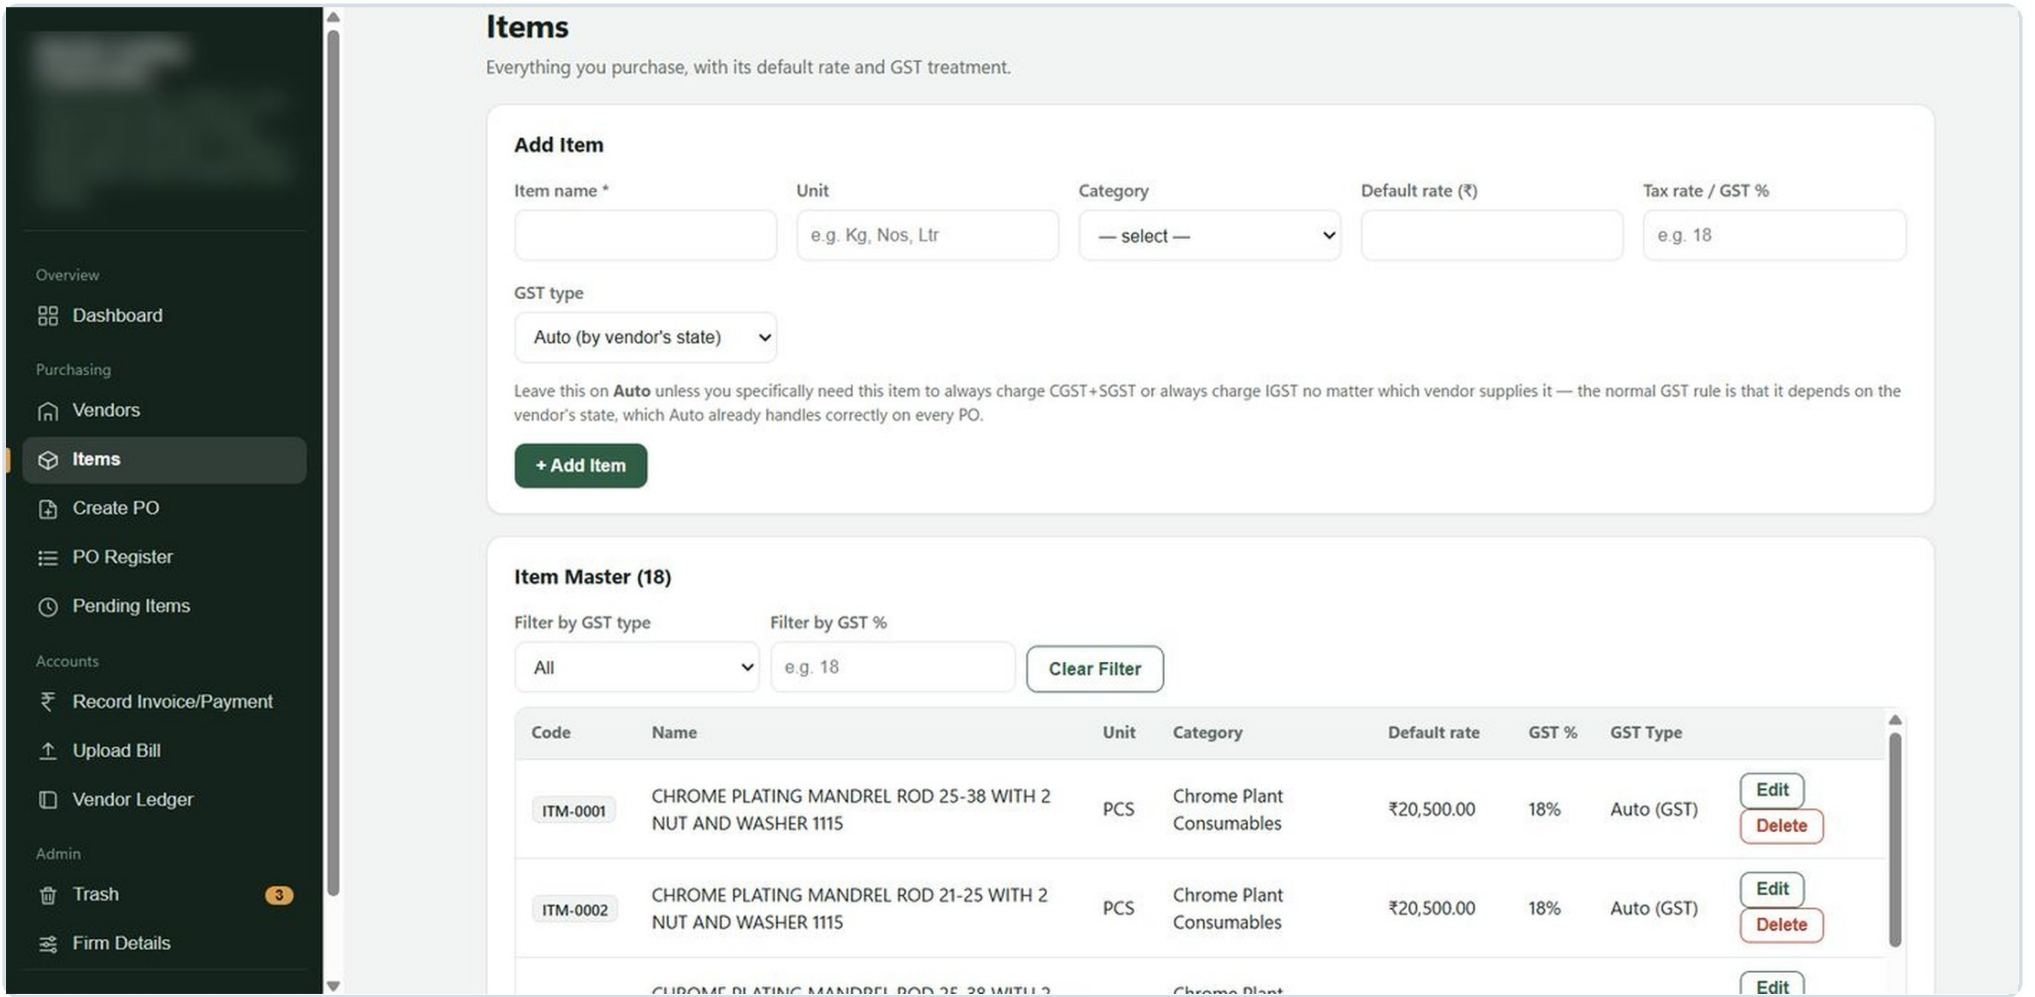

Create PO

Raises a purchase order and splits GST into CGST + SGST or IGST based on the vendor's state.

Item master

Everything the firm buys, with default rates and GST treatment.

Upload bill

Reads vendor bills automatically. Nothing is saved until a person confirms.
