SUMMARY

Product builder focused on fintech. I find where lending, investing and credit products lose users, size the opportunity, and turn it into PRDs, prototypes and working software. Built and deployed a procurement system that a manufacturing firm runs its purchasing on every day, and supported the 0→1 go-to-market of an AI customer-experience business. Comfortable moving between user research, data, engineering and business stakeholders.

EXPERIENCE

Perfect Ventures Jun 2026 – Sep 2026

Founder's Office Intern · Meesho AI Services launch

- **0→1 go-to-market:** defined target segments, ideal customer profiles, positioning and channel mix for an AI-led after-sales CX service for consumer electronics brands.
- **Customer discovery:** mapped buying committees and pain points across target accounts; used findings to rebuild the pitch narrative and demo flow, refined through mock client calls.
- **Pipeline and onboarding:** built the consultant partner network and onboarded early clients end to end, owning handoffs between sales, delivery and leadership.
- **Automation:** designed n8n and AI-assisted workflows for outreach and follow-ups, removing repetitive manual work from the sales cycle.

Codven Solutions May 2025 – Apr 2026

Project Coordinator

- **Delivery ownership:** ran client projects from discovery to launch as the single point of contact across business, design and engineering.
- **Requirements:** converted stakeholder requests into scoped user stories with clear acceptance criteria, challenging the "why" before work started.
- **Prioritisation:** sequenced work by impact, effort and deadline; managed scope changes and dependencies to protect release dates.
- **Risk management:** surfaced delivery risks early with mitigation plans and kept trackers and status reporting current for leadership.

PRODUCT WORK

Procurement System, Hard Chrome Tech Built & deployed · in daily use

- **Problem:** purchasing ran on paper and spreadsheets, with no reliable view of vendor dues, late deliveries or spend.
- **Built:** an SQL-backed system covering vendors, item master, purchase orders, goods receipt, invoices, payments and a vendor ledger with CSV export, plus a live dashboard.
- **Product decisions:** automatic GST split (CGST + SGST vs IGST) from the vendor's state; bill upload that reads invoice details and requires user confirmation; alerts for overdue deliveries and missing GST rates.

Volt Money: Loans Against Demat Mutual Funds PRD + prototype

PRD · Case study

- **Insight:** investors holding funds in demat are invisible to the eligibility engine; a ₹16 lakh portfolio produced an ₹11,045 limit against a ₹25,000 minimum loan.
- **PRD:** sized a ₹260–1,050 crore loan-book opportunity; specified 16 prioritised requirements, success and guardrail metrics, build ownership across lender and depositories, and a phased rollout.
- **Prototype and research:** built a clickable end-to-end journey; review mining showed post-loan servicing drives most complaints, so closure, notice and fee-transparency requirements were added before scaling limits.

Fintech Case Studies Problem → insight → solution → metric

- **Upstox, first-trade activation:** beginner mode with a guided starter SIP and one-tap UPI fund-add · metric: KYC-to-first-trade rate.
- **GoodScore, score to action:** a 90-day credit plan with the two highest-impact actions and projected score change · metric: users completing an action in 30 days.
- **True Balance, first repayment:** repayment calendar at disbursal, UPI AutoPay nudge and pre-due reminders · metric: first-EMI on-time rate.
- **Stable Money, first FD:** trust layer explaining deposit insurance and splitting across banks · metric: browse-to-first-FD conversion.

SKILLS

Product: discovery, PRDs, prioritisation (RICE, impact vs effort), funnel and drop-off analysis, prototyping, metrics design, go-to-market, stakeholder management

Fintech: digital KYC and onboarding, UPI and AutoPay, Account Aggregator, lending funnels, loans against securities, RBI digital lending basics

Tools: SQL, Figma, Notion, GA4, Google Search Console, Advanced Excel, n8n, LinkedIn Sales Navigator, Apollo, Lemlist, AI and prompt workflows

EDUCATION & CERTIFICATIONS

Bachelor of Business Administration, IIMT Group of Colleges 2022 – 2025

Product Management Certification, HelloPM (in progress) · Agile Scrum · Digital Marketing & SEO, Simplilearn
