Stable Money - Case study

Stable Money: Closing the Trust Gap on a First Fixed Deposit

Product case study by Sudiksha Gupta · Independent concept work

> **In one line:** Users come to Stable Money for higher FD rates, then hesitate to put money in a bank they've never heard of. A short trust layer at the moment of decision converts rate-shoppers into first-time depositors.

---

1. Context

- Stable Money lets users open fixed deposits, recurring deposits and bonds across many RBI-regulated banks and NBFCs from one app, including small finance banks that pay higher rates than large banks.
- It says it is trusted by 60 lakh+ customers. Users pay the partner bank directly, and Stable Money acts as a distributor.
- Deposits in partner banks are covered by DICGC deposit insurance of up to ₹5 lakh per depositor per bank.

A telling signal: Stable Money publishes articles answering "Is Stable Money fake or real?" and "Is it safe?". The trust question is common enough to need its own content.

---

2. Problem

Example user: Meera, 31, salaried, Bengaluru

Goal	Earn more than her savings account on ₹6 lakh
What she finds	A small finance bank offering a much higher FD rate than her own bank
What stops her	"I've never heard of this bank. What if it shuts down?"

What she does	Compares rates for a week, then leaves the money in savings

The rate convinced her. The bank name lost her.

3. Insights

- **The barrier is trust, not price.** Users already believe the rate; they doubt the bank and the app.
- **Safety facts exist but aren't at the decision point.** Insurance cover and regulation are explained in blog posts, not on the screen where users decide.
- **Large amounts feel riskier than they need to.** Users don't realise that splitting across banks keeps every rupee insured.
- **The first deposit is the hardest.** Once someone sees a deposit confirmed and interest credited, the second one is easy.

To validate: conversion from FD detail page to booking, split by bank familiarity; exit surveys on the booking screen; support tickets about safety.

4. Hypothesis

If every FD detail page shows a short trust panel (regulation, deposit insurance, how the money flows) and suggests splitting larger amounts across banks, more users will book their first FD.

5. Competitive landscape

	Stable Money	Users' own bank app	Other FD marketplaces
Rates	Often higher (small finance banks)	Lower	Similar range
Bank familiarity	Low for many partner banks	High	Low
Trust explained at booking	Opportunity	Not needed	Varies

	Stable Money	Users' own bank app	Other FD marketplaces
Help splitting across banks	Opportunity	No	Rare

Takeaway: Stable Money wins on rates. To convert, it has to borrow the trust that users' own bank already has.

6. Solution

Priority	Feature	What it does
High	Trust panel on every bank	RBI-regulated status, DICGC cover up to ₹5 lakh, and "your money goes directly to the bank" in three lines
High	Smart split	For amounts above ₹5 lakh, suggests splitting across two or more banks so everything stays insured
Medium	Start-small nudge	Suggests a small first deposit so users can see the full journey before committing more
Medium	Clear maturity view	Shows maturity amount, payout dates and early-withdrawal rules before booking
Medium	Confirmation from the bank	Shows the bank's own FD receipt, not just an in-app success screen

User flow

1. Meera opens a small finance bank's FD page and sees the rate.
2. Directly under it: "RBI-regulated · Insured up to ₹5 lakh by DICGC · Your money goes straight to the bank."
3. She enters ₹6 lakh. The app suggests: "Split into ₹4 lakh here and ₹2 lakh in another bank to keep all of it insured."
4. She chooses to start with ₹1 lakh first.
5. After booking, she sees the bank's FD receipt and her maturity date and amount.
6. A month later, after her first interest credit, the app suggests adding the rest.

7. Success metrics

Metric	Target
Browse-to-first-FD conversion	Primary metric
Second FD within 90 days	Increase
Share of deposits fully within insurance cover	Increase
Safety-related support tickets	Decrease
Premature withdrawals	Guardrail: no increase

8. Risks and trade-offs

Risk	Mitigation
Too much reassurance reads as a warning	Keep the panel to three short facts, with details one tap away
Splitting adds friction	Make it a suggestion with one-tap acceptance, never required
Small first deposits lower average ticket size	Track 90-day total deposits per user, not first deposit size
Insurance limits or rules change	Pull figures from a single updated source and review regularly

9. Rollout

1. **Test:** trust panel on FD detail pages for small finance banks only.
2. **Measure:** booking conversion against control, plus exit-survey responses.
3. **Expand:** add smart split for large amounts, then the start-small and second-deposit nudges.

10. Conclusion

Stable Money has already solved discovery and rates. Its next growth lever is trust at the exact moment users decide. Putting the safety facts on the booking screen,

and helping users stay fully insured, can turn rate-shoppers into repeat depositors.
